

SenseMyHeart

A Validated Cloud Service for
Heart Rate Variability

Heart Rate Variability (HRV)

HRV - variations in time of the beat-to-beat intervals (R-R)

Clinical applications:

- HRV has been **linked to** certain states of **anxiety** and **occupational stress**. [1,2,3]

[1] - Hagit, C.; et al. (1998). "Analysis of heart rate variability in posttraumatic stress disorder patients in response to a trauma-related reminder". *Biological Psychiatry* **44** (10): 1054–1059.

[2] - Nickel, P.; F. Nachreiner (2003). "Sensitivity and Diagnostics of the 0.1-Hz Component of Heart Rate Variability as an Indicator of Mental Workload". *Human Factors* **45** (4): 575–590.

[3] - Jönsson, P. (2007). "Respiratory sinus arrhythmia as a function of state anxiety in healthy individuals". *International Journal of Psycho-physiology* **63** (1): 48–54.

HRV Measures

Relative measure of data quality: [4]

NN/RR – fraction of total RR intervals that are classified as normal-to-normal

Commonly used **time-domain** short-term measures:* [4]

AVNN Average of all NN intervals

SDNN Standard deviation of all NN intervals

rMSSD Square root of the mean of the squares of differences between adjacent NN intervals

pNN50 Percentage of differences between adjacent NN intervals that are greater than 50 ms

* - Presented as last seen at <http://www.physionet.org/tutorials/hrv-toolkit/>, of 2nd April 2013

HRV Measures

Commonly used **frequency-domain** short-term measures:*[4]

TOTPWR	Total spectral power of all NN intervals up to 0.04 Hz
VLF	Total spectral power of all NN intervals between 0.003 and 0.04 Hz
LF	Total spectral power of all NN intervals between 0.04 and 0.15 Hz.
HF	Total spectral power of all NN intervals between 0.15 and 0.4 Hz
LF/HF	Ratio of low to high frequency power

Webservice

A simple definition of **webservice**:

*An arbitrary **function** or set of operations that can be accessed by other programs over the web (HTTP).*

Characteristics:

- **Machine-to-Machine** communication.
- Promotes **cloud interoperability** between machines and OSs.

Motivation

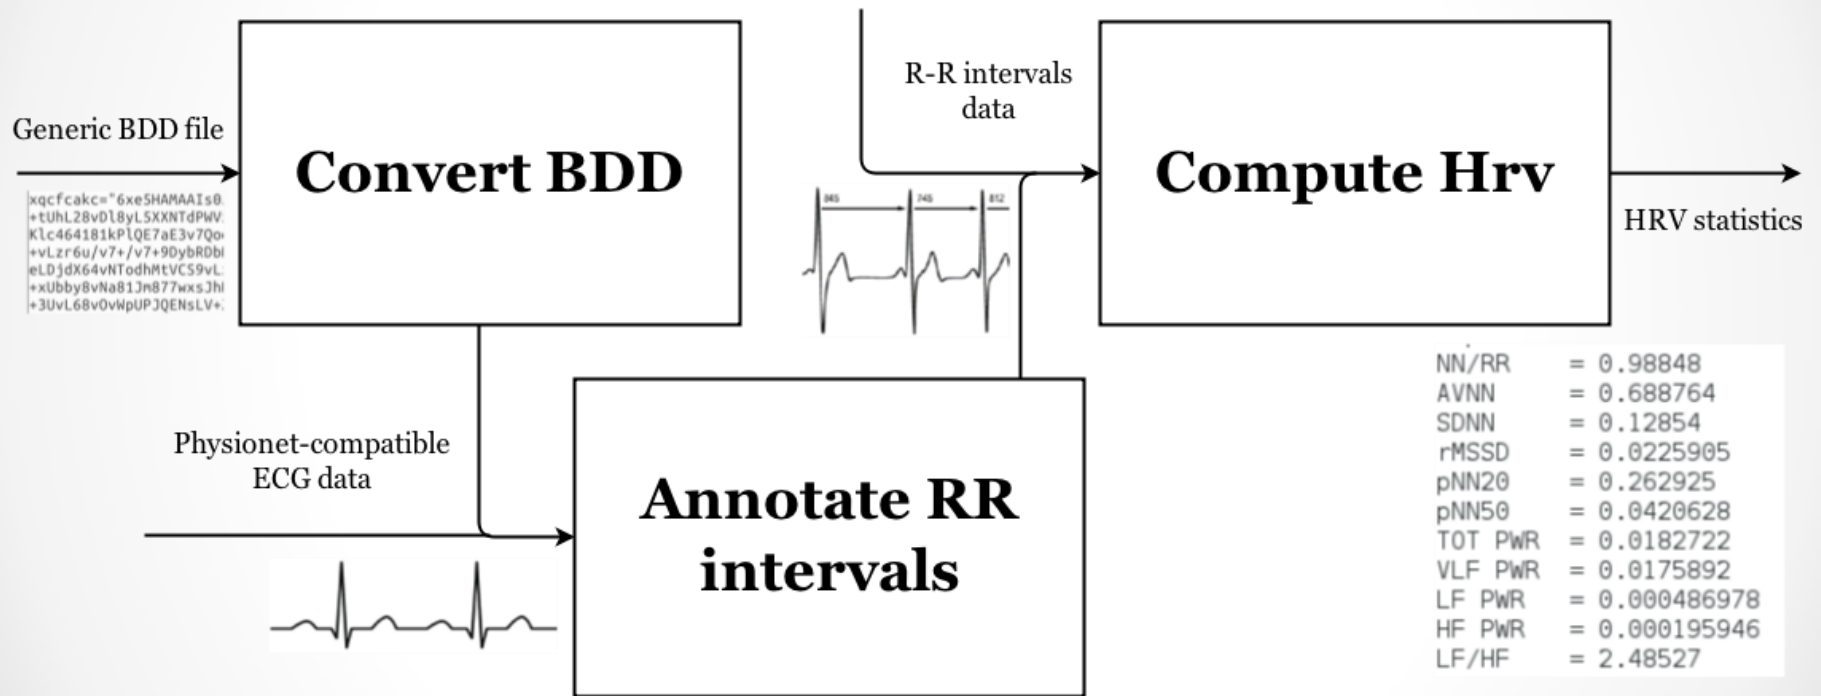

Why a HRV webservice?

- To provide a validated cloud **API** to applications that use **Vital Jacket** or other heart monitors.

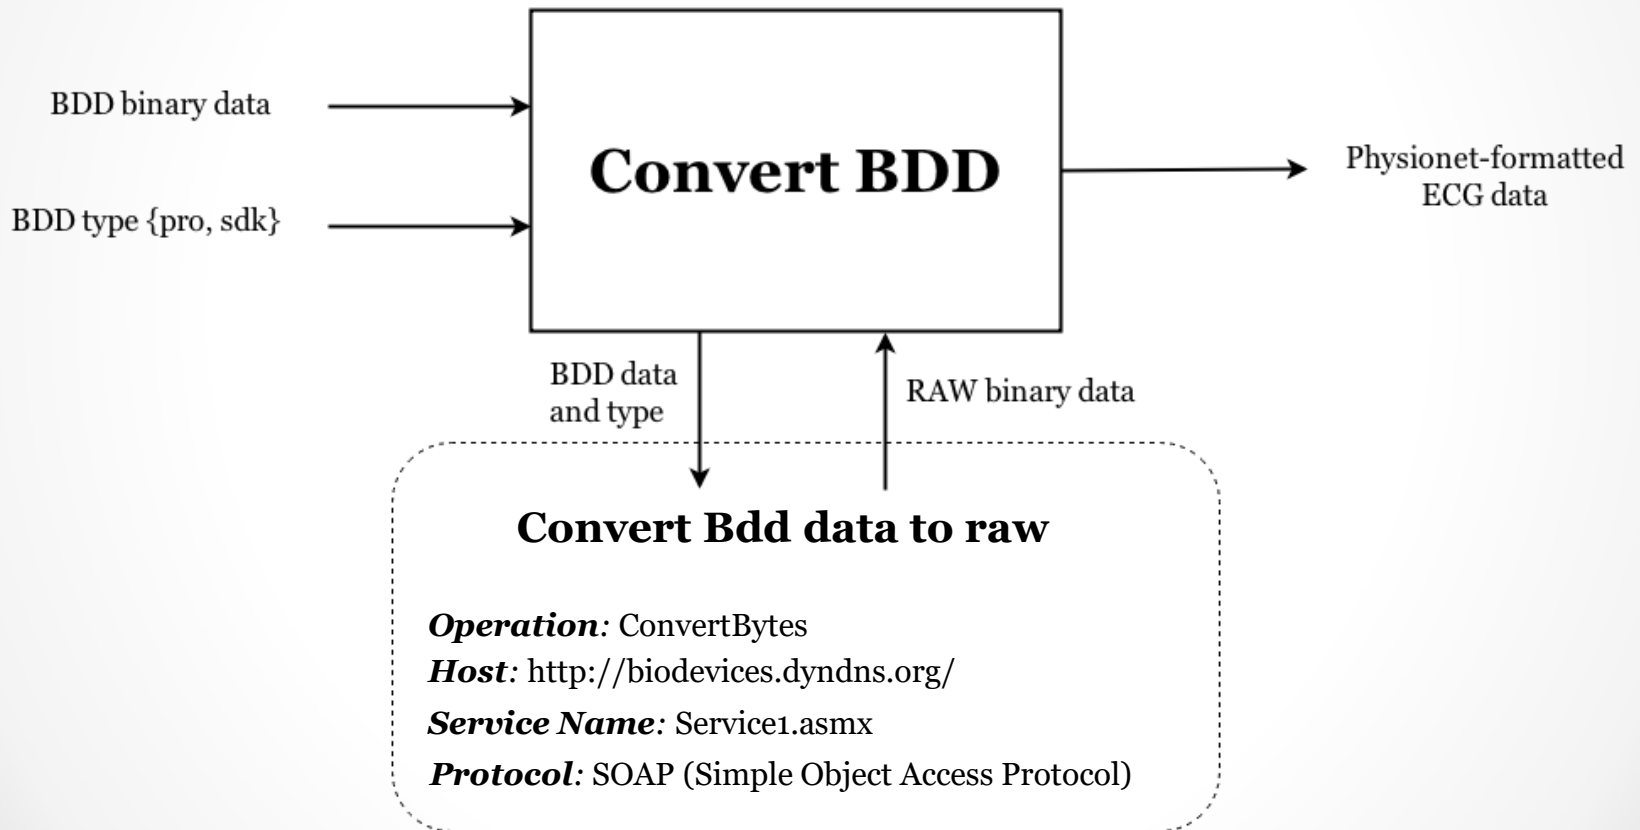

Main motivator:

- Cloud-based webservice made available to the FutureCities platform.

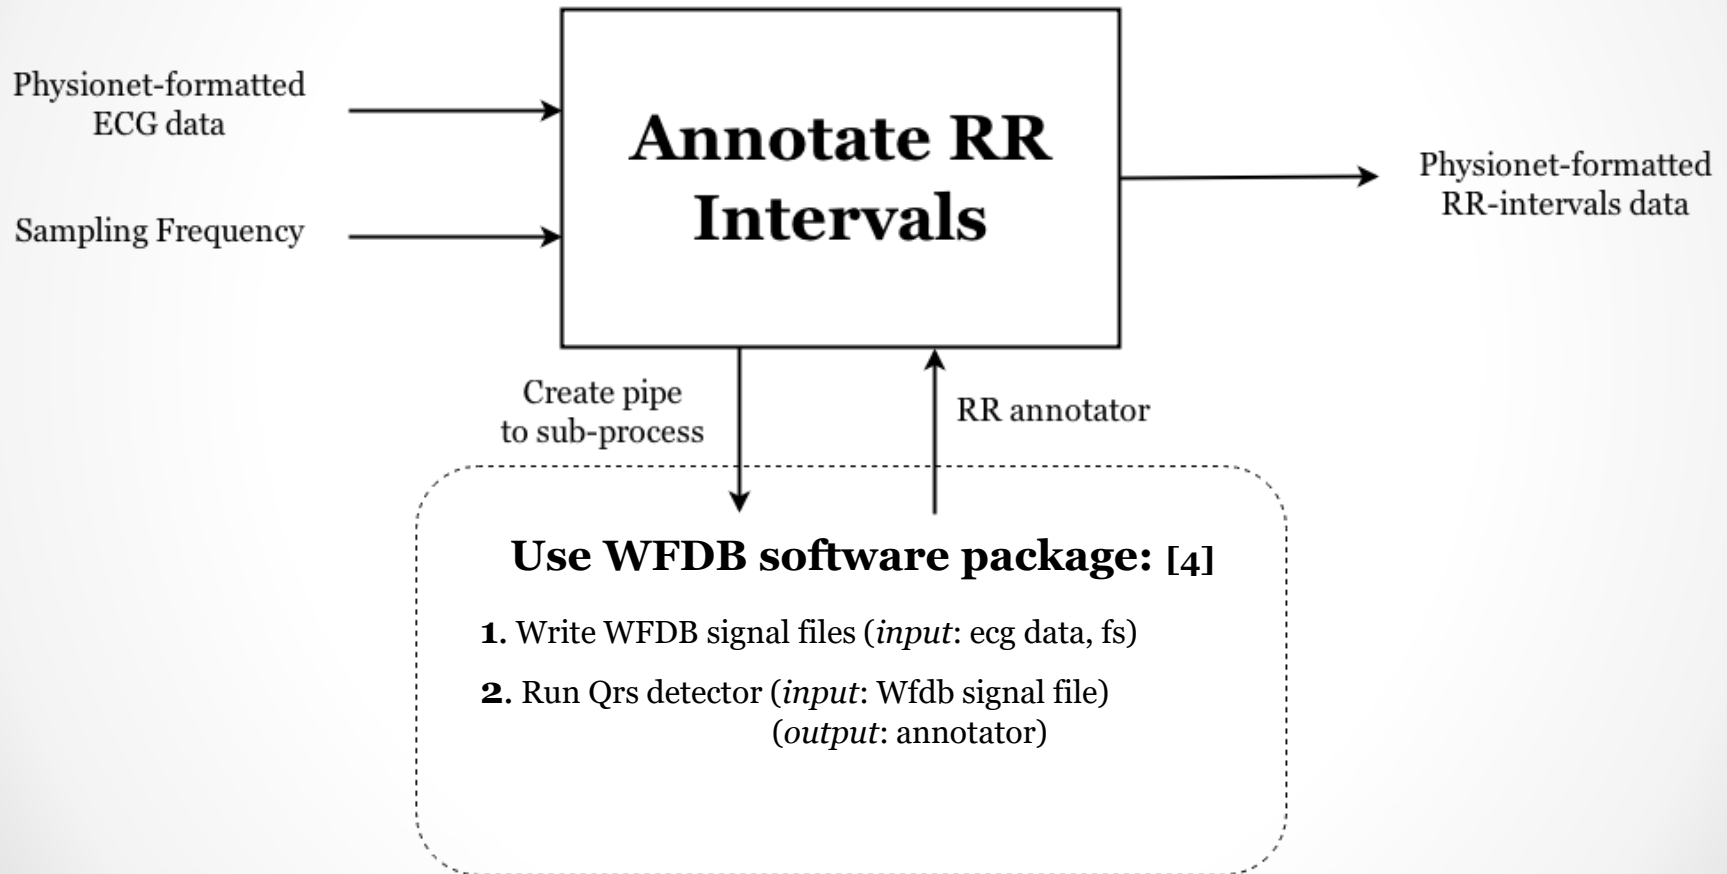

Process Diagram

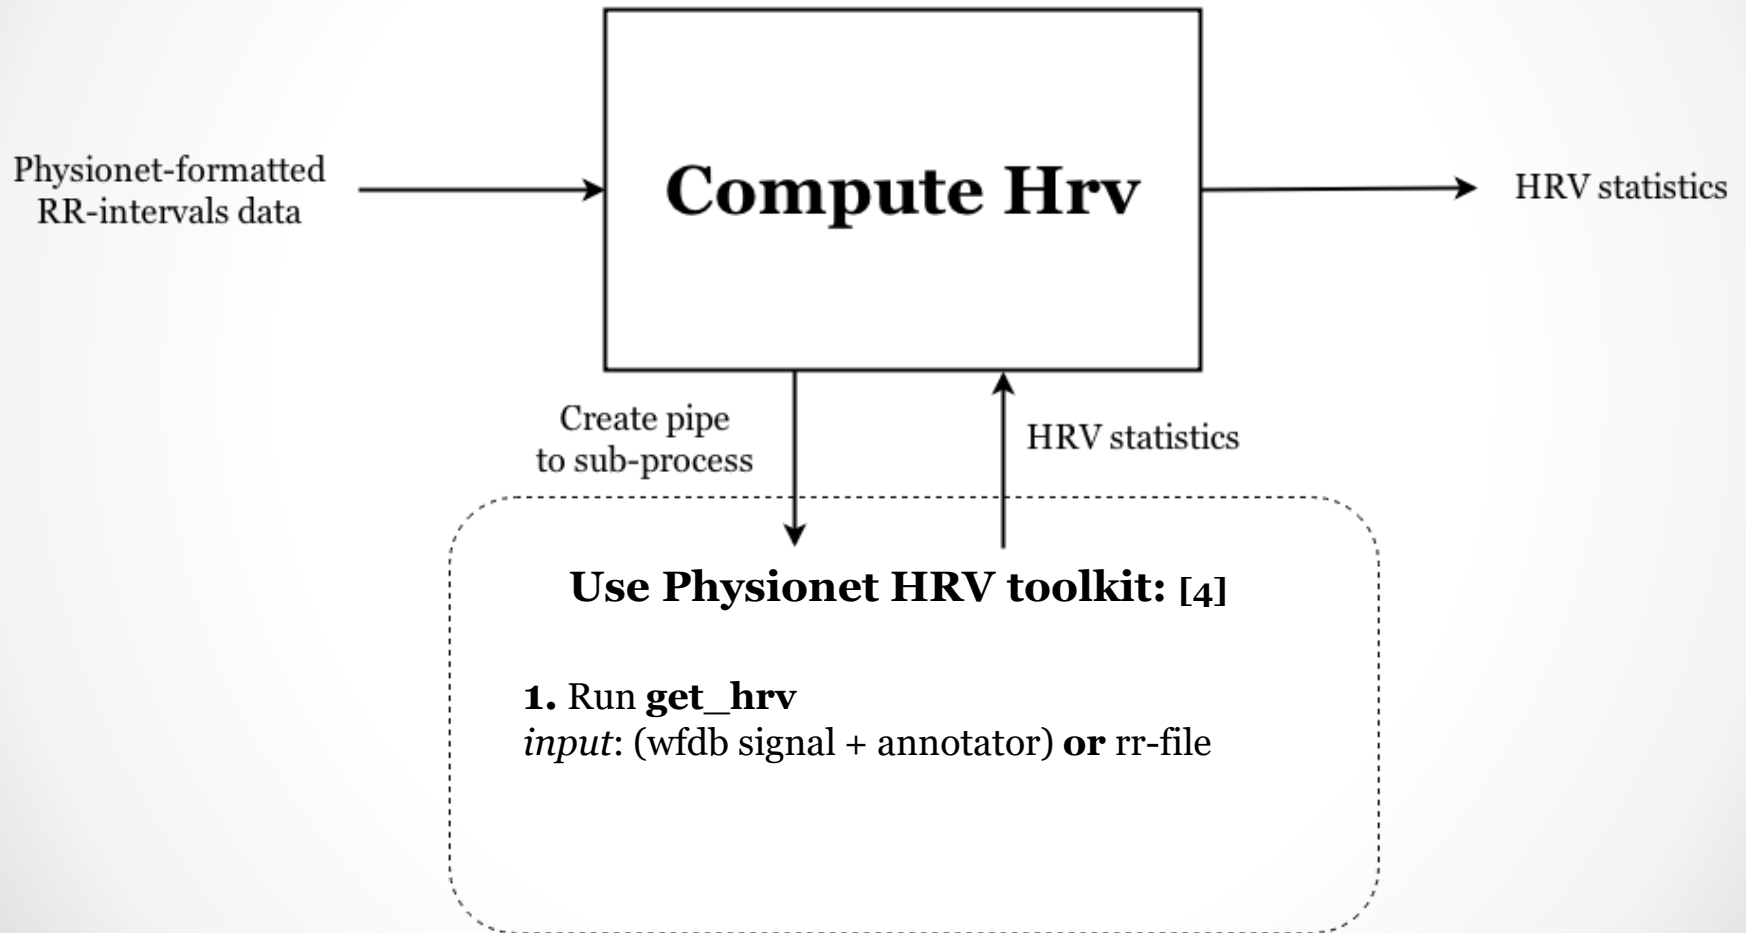

Modules: Convert BDD

Modules: Annotate RR

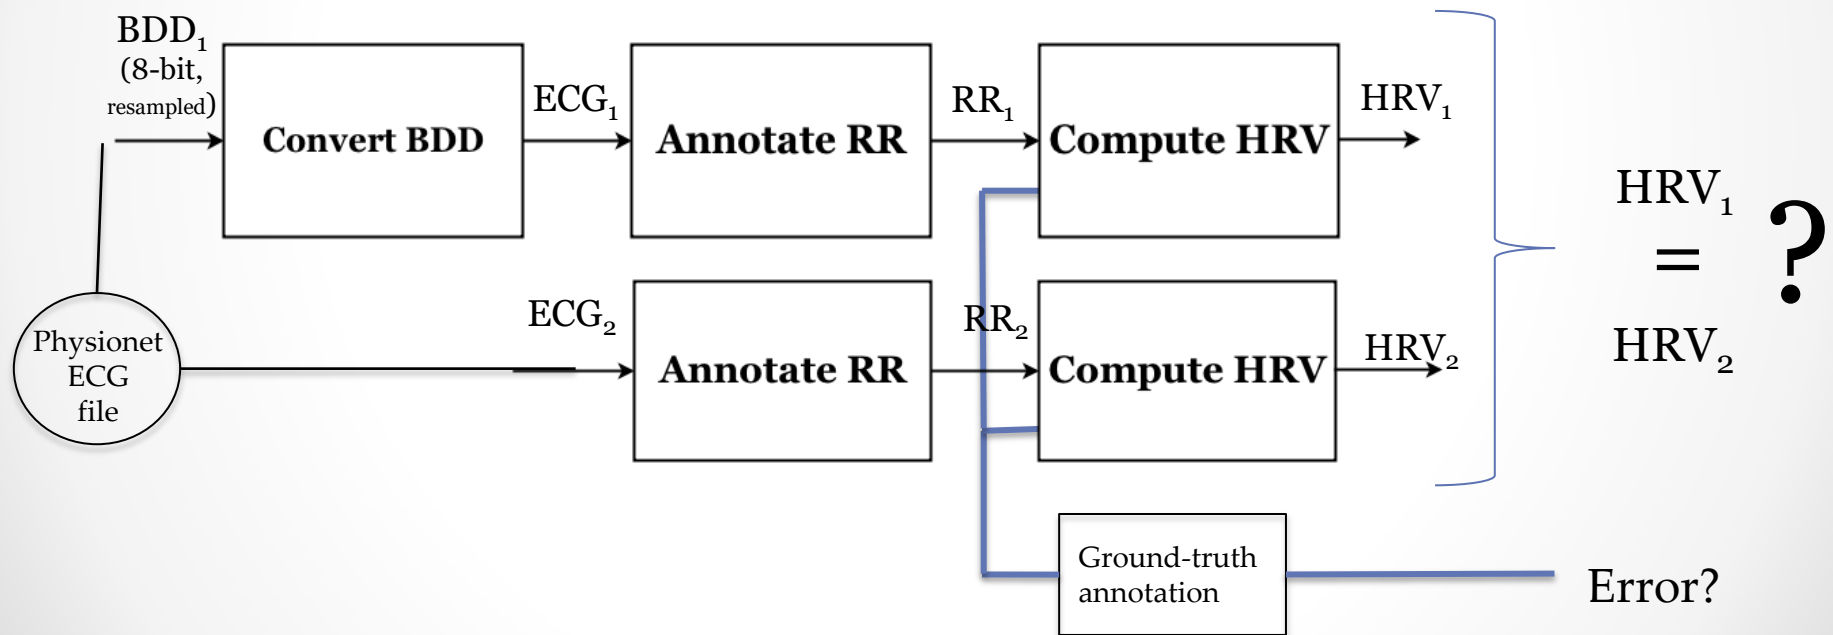

Modules: Compute Hrv

Validation

Question: *Given a Physionet ECG signal and its equivalent in bdd format, do they produce the same output, i.e. HRV statistics?*

Validation

Dabatase: The MIT-BIH Normal Sinus Rhythm Database (nsrdb)[4]

- 18 records of \approx 24h of duration
- Sampled at 128 Hz

AVERAGE - ALL (18)			
SHORT HRV STATS	Ground Truth*	HRV₁ (BDD)	% ERROR

Validation: Qrs detectors

Human agreement annotators (ground-truth) were used for previous validation...

But we need a qrs detector to annotate the RR intervals!

Which is the BEST annotator ?

VJ vs. each Physionet detector:

SQRS

AVERAGE - ALL (18)					
SHORT HRV STATS	Ground Truth	VJ as annotator	% ERROR	SQRS as annotator	% ERROR
NN/RR	0.978113	0.97620	0.20%	0.94391	3.50%

LF/HF	2.480736	2.53294	2.10%	2.43525	1.83%

Validation: Qrs detectors

Results:

- There was not a Physionet annotator that was consistently better than the others.
- So, the Physionet annotator that produces the **highest NN/RR ratio** may be selected. However, its 3 times the computational cost of choosing one directly.

AVERAGE - ALL (18)					
SHORT HRV STATS	GROUND TRUTH	VJ as annotator	% ERROR	BEST annotator	% ERROR

Only IF the bands are defined in the command!

Computing times

File	Size (initial)	Size after conversion	Duration	Average Real Time Spent (seconds)		
				Convert Bdd	Compute Hrv (wfdb signal)	Compute Hrv (rrlist)
<u>16265.bdd</u>	11.5M	45M	25h:06m:00s	220 s	9.79 s	4.91 s
<u>30.bdd</u>	220k	870k	15m:00s	4.10 s	0.311 s	0.207 s

WebService: Operations

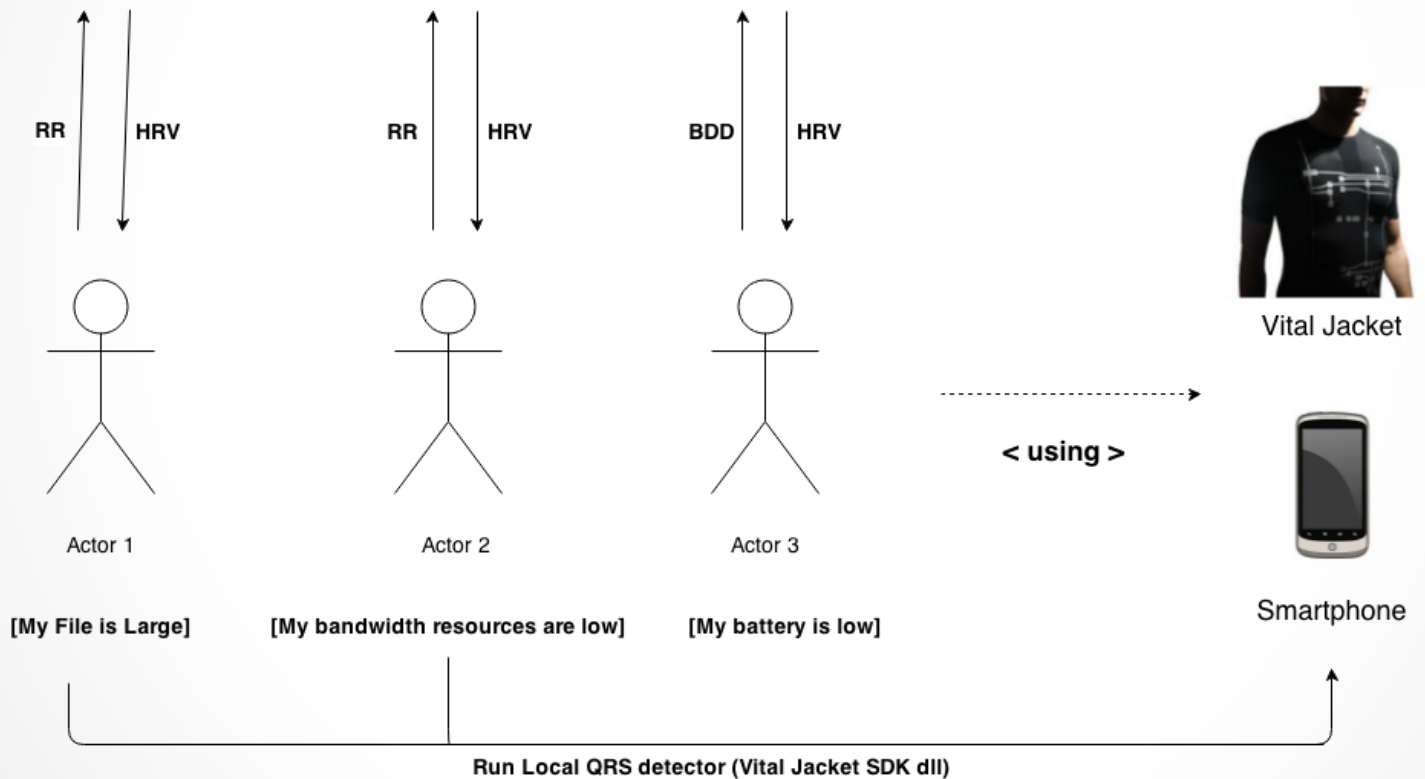

<u>Operation</u>	<u>Description</u>
getHrvFromBdd	Compute HRV short-term statistics from BDD encoded binary data
getHrvFromEcg	Compute HRV short-term statistics from ECG Physionet-formatted binary data
getHrvFromRR	Compute HRV short-term statistics from RR intervals Physionet-formatted binary data

Architecture: SOAP

- Stateful and complex operations
- Supports asynchronous processing and invocation
- Defines formal contracts

Typical Application

Future Directions

- **Deploy** the webservice.
- **Add operations** to compute stress/anxiety indicators from HRV measures, based on metrics presented in previous studies:
 - Decrease of HF activity under conditions of acute time pressure and emotional strain. [2]
 - Reduced HRV in individuals reporting a greater frequency and duration of daily worry. [5]
